Projects

Nike Clone

E-commerce Site built with HTML, CSS, JS, Media Queries, and Bootstrap

<https://nikecloneproject-js.onrender.com/> 

- This Nike Clone project is a front-end replica of the official Nike website using HTML, CSS, and JavaScript.
- It includes a responsive design, product listings, and interactive navigation for a smooth user experience.
- The **Add to Cart** functionality lets users select products, which are stored in **local storage** for persistence.
- Users can view, update, or remove items from the cart even after refreshing the page.
- This project highlights essential front-end skills, DOM manipulation, and data handling using local storage.

Real-Estate

Real-Estate Site built with HTML, CSS, JS, Media Queries, and Bootstrap

<https://real-estate-4g3a.onrender.com/index.html#> 

- This Real Estate website allows users to **browse and view properties** with detailed images and description features a clean, responsive UI for exploring property listings based on location, price, and type.
- Users can **schedule property viewings** by selecting a preferred date and time through a simple booking form.
- Scheduled visits are stored using **local storage** or backend integration (if applicable) for persistence.
- The project showcases front-end development, form handling, and user interaction with scheduling logic.
